

Project Demo Planning

Date	2 July, 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Project Demo Planning

A well-structured demo plan ensures that the team presents the Credit Card Approval Prediction project effectively by explaining the problem, demonstrating the machine learning model, and showcasing the Flask web application. The demo highlights the workflow from applicant data input to real-time credit card approval prediction.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction	Introduce the project, objectives, and problem statement.	5 min	Kadali Neeraj
2	Dataset & Model Training	Explain dataset preprocessing, LabelEncoders, and the selection of the Random Forest Classifier (200 estimators) as the final model.	7 min	Kadali Neeraj
3	Flask Web Application	Demonstrate the user interface(dark), applicant data entry and model integration.	10 min	Kadali Neeraj
4	Live Prediction	Show real-time credit card approval prediction using sample applicant data.	10 min	Kadali Neeraj
5	Results & Performance	Present model accuracy, evaluation metrics, confusion matrix, and comparison of algorithms.	15 min	Kadali Neeraj
6	Conclusion & Future Scope	Summarize the project, discuss benefits, limitations, future enhancements, and answer questions.	20 min	Kadali Neeraj

Demo Flow Summary

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the need for automated credit card approval prediction in banking.
2	Solution Overview	Describe dataset, preprocessing, machine learning models, and Flask architecture.
3	Live Feature Demonstration	Enter applicant details, predict approval status, and explain the prediction output.
4	Q&A Session	Address evaluator queries regarding the Random Forest algorithm (88.41% accuracy), Flask deployment on Render, and frontend implementation.
